

Exercises

- Create a calculator that only performs addition. Users can input values and view the results.
- Modify the previous calculator to allow users to select the operation as well.
- Implement a login process where users can save their username and password and then verify their login credentials.
- Develop a bot that interacts with users based on their choices. Ensure there are at least 3 interactions and 3 different possible outcomes.
- “Guess the words” game: Design a game where the user attempts to guess 3 secret words one by one. Each guess is accompanied by a single hint, and the user receives feedback on the number of correct answers.
- “Find the treasure” game: Create a game as a text adventure. Users encounter questions such as “You found a chest. Do you open it?” and their choices determine whether they discover treasure or not.
